Module 1.4

Use the chain rule to compute the symbolic derivative with respect to x of the following function.

$$f(x,y) = (\exp(10xy))^2 + 95\sin(y)$$

What is $f'_x(x,y)$?

---

1   1 point

- ○ 20 exp(10 x)
- ○ 20 y exp(20 x y)
- ○ 20 exp (x)^2 + 95 sin(y)
- ○ 20 y exp(20 x y) + 95 cos(y)
- ○ 20 y exp(10 x y)

---

2   1 point

How many Function calls are there in the original function with no reductions? (a function can take at most 2 arguments)
